The then and now of photography.

The first permanent photo

a recent photo

In 1827 the first permanent photo was taken by Joseph-Nicephone Niepce. This started in the early 19th century Niepce began experimenting with noel graphic arts printing method called lithography, this is what lead him to making the first permanet photo.

Today there are many diferent types of cameras. Including the fact that photos do not have to be in exposure to sunlight for 8 hours! Nowadays pictures are made in color and can take a clear picture of something in a split second.

Compare the start of photography and you can clearly see that it has evolved a lot since 1827
